

Akın Öztorun

akin@akinoztorun.dev · Türkiye (remote) · <https://linkedin.com/in/oztorun>

Senior Frontend / Product Engineer with 9+ years building TypeScript-first web products in Vue, Nuxt, React, and Node. Strong track record shipping user-facing features end to end, improving product quality, and building maintainable frontend systems with a focus on performance, reliability, observability, and cross-functional delivery. Comfortable owning vertical slices from discovery through production rollout, working remotely across EMEA time zones.

EXPERIENCE

Senior Frontend Engineer (Freelance) Proxify · Remote 2025-11 – Present

- Took over full frontend ownership of a Vue 3 / Nuxt platform for a German client after its first month.
- Led a Nuxt 4 migration to a Feature-Sliced / vertical-slice architecture, codifying ownership, dependency direction, and lint-enforced public APIs to reduce cross-feature coupling and keep changes reviewable.
- Designed a GitLab release pipeline with semantic versioning, Sentry release tracking, SonarQube quality checks, and AWS OIDC-based Amplify deployments.
- Managed application state with Pinia, using typed stores and composable patterns for cross-feature data sharing in the Vue 3 / Nuxt platform.

Senior Software Engineer Proxify · Remote 2022-01 – 2025-10

- Owned the frontend of a multi-step ATS funnel handling ~400K applications per year.
- Worked with product / design / backend on typed API contracts, validation, and observable error handling.
- Built a self-service onboarding portal that replaced a manual workflow and reduced time-to-active-account.
- Increased ATS funnel completion from ~39% to ~65% via instrumentation, friction-point analysis, and validation UX rebuilds.

Frontend Engineer Skeyl · Remote 2016-06 – 2022-01

- Served as primary frontend owner for React / TypeScript SPAs and dashboards.
- Built small backend-adjacent utilities with Node.js and AWS Lambda to support frontend feature work.
- Modernized legacy frontend codebases incrementally, migrating to TypeScript and component-driven architecture without halting feature delivery.
- Raised Lighthouse scores from the 40s to the 90s by attacking render-blocking assets, image strategy, and JS payload size.

EDUCATION

Bachelor's Degree, Metallurgical and Materials Engineering — Karadeniz Technical University (2014)
